

Conducting business without harming the environment and compliance with the principles of proper handling of waste electrical and electronic equipment is a priority for us. That is why we have registered in the register of enterprises, maintained by the Chief Inspectorate of Environmental Protection. As a Producer of Equipment, we have started a cooperation with **ELECTRO-SYSTEM** Electrical and Electronic Equipment Recovery Organization S.A. Each of us is a user of electrical and electronic equipment, and thus, a potential generator of waste, that is dangerous to people and the environment! On the other hand, used equipment is a valuable material from which we can recover raw materials such as copper, tin, glass, iron, and even gold and silver.

Information on the collection system for waste electrical and electronic equipment.

- 1. Leave your used equipment at the store where you buy new equipment.**
Every store is obliged to accept old equipment free of charge if you buy new equipment of the same type and function from it.
- 2. Leave small-sized used equipment at a major market without buying new equipment.**
Stores with a sales area of household equipment of min. 400 square meters, are required to accept, free of charge, at this unit or in its immediate vicinity, used household equipment, none of whose external dimensions exceed 25 cm, without having to buy new household equipment.
- 3. Return waste electrical and electronic equipment at the place of delivery.**
A distributor, when supplying equipment intended for households to a purchaser, shall be obliged to take back used household equipment free of charge at the place of delivery of such equipment, provided the used equipment is of the same type and performed the same functions as the supplied equipment.
- 4. Take the used equipment to a collection point.**
Information about the nearest location can be found on the municipal website or the bulletin board of the municipal office, as well as at www.remondis-electro.pl.
- 5. Leave the equipment at the service center.**
If it is uneconomical or technically impossible to repair the equipment, the service center is obliged to accept it free of charge.

The equipment collected in this way is sent to specialized processing plants, where hazardous components will be removed from it first. The remaining components will be recovered and recycled. Any device powered by electricity or batteries should be marked with a crossed-out trash can symbol.

The symbol of the **crossed-out garbage**, that is placed on the equipment, packaging or documents attached to, means that the product must not be disposed of together with other waste. It is the user's responsibility to take the used equipment to a designated collection point for proper treatment. At the same time, the marking indicates that the equipment was placed on the market after August 13, 2005.

- Do not dispose of used equipment together with other waste! There are fines for doing so.
- Proper handling of used equipment prevents potential negative consequences for the environment and human health.
- At the same time, we save the natural resources of our earth by reusing the raw materials obtained from processing equipment.

We encourage proper handling of waste electrical and electronic equipment in cooperation with ELECTRO-SYSTEM S.A. and REMONDIS Electrorecycling Sp. z o.o.
